

BUSINESS WASTE

Managing Office Waste Streams

GATX main offices utilize recycling systems to divert the following waste streams:

- Paper, plastic and metal wastes
- Batteries
- Printer toners
- Electronic waste
- Residual waste (GATX Rail Europe Offices Only)

GATX Corporate Headquarters Office Move

We worked to minimize our environmental impact when relocating offices:

- Consolidated electronics equipment for new data center
- Recycled old office files prior to relocation and encouraged departments to transition to electronic filing.
- Repurposed old office furniture and artwork
- Moved into a Leadership in Energy and Environmental Design (LEED) Gold building
- Upgraded to all LED lighting and installed light sensors in conference rooms and offices
- Computer monitors and TVs were upgraded from LCD to LED
- Purchased energy efficient refrigerators
- New docking station pulls power as needed to recharge laptops
- Less printers in office, leading to less toner waste
- Provide coffee in bulk verses pods
- Eliminated fax machines
- Chose durable materials and furnishings to reduce the costs and waste associated with replacement (e.g., carpet tiles)
- Purchased office furniture with recycled content
