Oyu Tolgoi: Advancing value, creating options

TURQUOISE HILL

Forward-looking statements

2

This presentation includes certain “forward-looking information” within the meaning of applicable Canadian securities legislation and “forward-looking statements” within the meaning of the “safe harbour” provisions of the United States Private Securities Litigation Reform Act of 1995.

All statements and information, other than statements of historical fact, are forward-looking statements and information that involve various risks and uncertainties. There can be no assurances that such statements or information will prove accurate and actual results and future events could differ materially from those expressed or implied in such statements. Such statements and information contained herein, which include, but are not limited to, statements respecting anticipated business activities, planned expenditures, corporate strategies and other statements that are not historical facts, represent the Company’s best judgment as of the date hereof based on information currently available. The Company does not assume any obligation to update any forward-looking statements or information or to conform these forward-looking statements or information to actual results, except as required by law.

For a more detailed list of specific forward-looking statements and information applicable to the Company, refer to the *Forward-Looking Information* and *Forward-Looking Statements* sections of the Annual Information Form dated as of March 23, 2017 in respect to the year ended December 31, 2016.

All amounts are in U.S. dollars, unless otherwise stated.

Turquoise Hill's investment thesis

3

- 1. Oyu Tolgoi expected to be world's third-largest copper mine**
- 2. Significant cash flow expected from underground development**
- 3. Hugo North Lift 1 financing in place¹**
- 4. Turquoise Hill should benefit from expected drop in copper supply (~2020)**
- 5. Oyu Tolgoi's resources provide long-term development optionality**

1. Financing sources includes project finance facility, supplemental debt (in progress), operating cash flow from Oyu Tolgoi and Turquoise Hill's cash; excludes power plant CAPEX.

Oyu Tolgoi's expected production growth

4

■ Copper ('000 tonnes) ■ Gold ('000 ounces)

Expected copper production growth 2017 – 2025: **+320%**

Expected gold production growth 2017 – 2025: **+450%**

Long-term copper fundamentals strong

5

- Copper market likely to enter a temporary deficit in 2017.
- Ongoing attrition at existing mines driven by declining grade
- Continued demand growth requires new capacity in the medium-term
- Market expected to return to balance from 2018 before moving into deficit from 2020
- China now largest buyer of gold and continues to be largest consumer of copper

First quartile producer

6

Source: Wood Mackenzie (Q4'16 Cost Service), 2016 Oyu Tolgoi Technical Report and Turquoise Hill Resources. Normal C1 cost + sustaining capex, range capped at -100/lb & 400/lb for base, highly probable and probable mines only.

Underground development

Photo: Jumbo working on main access lateral development off of Shaft 1.

2016 Resources Case: ~3.4 billion tonnes

8

Block cave concept

- Gravity used to exploit deep ore body
- Cave propagation (caveability) depends on in situ stresses and host rock's ability to fracture
- Initial drill, blast and extraction focused on bottom section of ore body via drawpoint to create void
- Broken ore removal from undercut area causes ore above it to collapse (vertical propagation) and void forms drawpoint
- In traditional block cave, whole ore body extracted through static set of drawpoints at base of ore body
- Once undercutting complete, no on-going construction; only production until end of cave life

- Ore body progressively and systematically mined through moving *cave front* via series of panels
- Draw rates carefully managed to avoid riling and premature dilution
- Rate of undercut advance matched to both draw column height and production capacity

Alternative production cases

10

1. NPV_{8%} assumes \$3.00/lb copper and \$1,300/oz gold

2. Expansion capital costs include only direct project costs and exclude interest expense, capitalized interest, debt repayments, tax pre-payments and forex adjustments. In all cases, total capital cost excludes capital costs for the year 2016. Expansion capital for 2016 excluded is \$0.46 billion.

3. Expansion capital costs inclusive of 2016 Reserves Case expansion capital. Expansion capital costs include only direct project costs and exclude interest expense, capitalized interest, debt repayments, tax pre-payments and forex adjustments. In all cases, total capital cost excludes capital costs for the year 2016.

Underground mining sequence

11

- Initial underground production begins with Panel 0
- Highest copper grades occur during ramp up exceeding 2.5% in several years
- 2024-2026: Oyu Tolgoi *peak* copper production during period expected to average > 600,000 tonnes annually due to high grades
- 2024-2036: Total mine copper production over period expected to average > 500,000 tonnes annually
- Following completion of Panel 0, production will move outward with Panels 1 and 2

Underground development status

12

Lateral development

- 4.0 equivalent metres completed (January 2016 – end Q2'17)
- Increased metres expected in 2H'17 with larger crusher
- Full utilization of third crew expected in Q3'17
- Fourth and fifth crews in training

Shaft 2

- Approximately 65 vertical metres¹ remaining until end of shaft sinking (expected late 2017)
- Shaft fit-out over 2018
- Used for production and ventilation

Shaft 5

- Approximately 520 vertical metres¹ remaining until end of shaft sinking (expected early 2018)
- Increase in lateral development when completed
- Used for ventilation

Convey-to-Surface

- Surface excavation complete
- Underground decline commenced in Q1'17

1. At the end of Q2'17.

Complete ramp-up expected by 2027

13

Timeline is illustrative only and subject to change.

Sources and uses of development capital

14

Uses of development capital (2016 – 2022)

Uses	Amount (\$B)	Note
Underground development	\$5.3	Includes concentrator upgrade
Debt service	\$3.3	Debt repayment, interest and financing fees
Total	\$8.6	

Sources of development capital (2016 – 2022)

Sources	Amount (\$B)	Note
Oyu Tolgoi operating cash flow	~\$2.0	Dependent on commodity prices
Project finance	\$4.4 + up to \$1.6	\$4.3 drawn down; remaining remitted by US Ex-Im
Turquoise Hill cash	\$1.4	
Total	\$9.4	

Hugo North Lift 1 production schedule

15

Figure: 2016 Oyu Tolgoi Technical Report.

Underground capital spend profile
(\$ billion)

- Underground expansion capital, VAT and escalation of \$5.3 billion
- Underground sustaining capital, VAT and escalation of \$2.8 billion to full ramp-up expected in 2027

A wide-angle photograph of a massive open-pit mine. The mine is characterized by steep, terraced rock walls and a network of dirt roads. A large yellow haul truck is visible on one of the roads, moving towards the left. The sky is clear and blue. The overall scene depicts large-scale industrial mining operations.

Open-pit operations

Photo: Oyu Tolgoi's open-pit mine.

Production highlights

18

All Injury Frequency Rate
(per 200,000 hours worked)

Industry-leading safety performance

Concentrator throughput
('000 tonnes)

Throughput target of 40 million tonnes for 2017

Copper in concentrates
('000 tonnes)

2017 guidance of 130,000–160,000 tonnes of copper and 100,000 – 140,000 ounces of gold

Gold in concentrates
('000 ounces)

2017 gold production impacted by low grade Phase 6 ore

Financial highlights

19

Production and financial guidance

20

	2016	2017
Copper in concentrates	201,300 tonnes (actual) 175,000 – 195,000 tonnes	130,000 – 160,000 tonnes
Gold in concentrates	~300,000 ounces (actual) 255,000 – 285,000 ounces	100,000 – 140,000 ounces
Operating cash costs	\$775 million (actual) \$840 million	\$720 million
Capital expenditures	\$100 million (open pit actual) \$200 million	\$100 million (open pit) \$825 million - \$925 million (underground)

- 2017 production impacted by ~25% less copper head grade and ~50% less gold head grade
- 2017 operating cash costs reflects cost improvements and impact of lower logistics costs from decreased production
- 2017 open-pit CAPEX reflects lower maintenance costs, reduced deferred stripping cost due to optimization and improved tailings storage costs

Reserves case concentrator performance

21

Figure: 2016 Oyu Tolgoi Technical Report. Note: a = actual, e = expected.

Managing near-term ore grade challenges

22

- Phases 6 and 4a as well as low-grade stockpile ore processed in 2017
- Phase 4 stripping provides access to higher ore grades in 2018

Oyu Tolgoi – a long-term growth opportunity

23

- **Advancing** underground development
- **Creating** long-term development options
- **Demonstrated** productivity and cost improvements
- **Best copper asset** in development
