

Correlation of EXS-21546 plasma exposure to inhibition of A_{2A}R signalling

Data points include 90 mg, 250 mg (fasted and fed) and 400 mg cohorts. Percentage (%) CD8+ pCREB inhibition is a measure of pCREB MFI inhibition of fold activation. pCREB: phosphorylated CREB

Plasma concentration of EXS-21546 supporting BID dosing

Error bars= SD; n= up to 11
