| **EBIT** | Operating profit as disclosed in the Group income statement per the Annual Report |

# Glossary of terms (continued)

| Investment measures | |
|---|---|
| **5-Year Forecast Payback** | The ratio of projected future Repeat Customer Contribution profit we expect to earn from the new customers recruited in the year over the Investment in New Customers. We forecast contribution at a customer level using a machine learning algorithm which weighs several characteristics including demographics, interactions and transactions forecast over a five year horizon. This is then aggregated to a monthly, then annual, cohort level for reporting purposes. As this is an undiscounted forward-looking estimate it cannot be reconciled back to reported financial results. As we can refine this expectation over time, we also update the expected returns from prior year investment. For this year, we will also show the lifetime payback for comparative purposes. |
| **General and administrative costs** | Administrative costs excluding advertising cost |
| **Investment in New Customers** | The Investment in New Customers during the year, including contribution profit/loss from New Customer sales and advertising costs. Please note we have updated the description of this term to elaborate on its components, but the underlying calculation has not changed |
| **5-Year Lifetime value** | The future Repeat Customer Contribution profit we expect to earn from customers recruited in a discrete period of time. We calculate this future contribution using a Machine Learning (ML) model. Collecting data for a number of key customer characteristics including retention, order frequency and order value along with customer demographics and non-transactional data, the ML algorithms then predict the future (lifetime) value of that customer |
| **Repeat Customer Contribution profit** | The profit attributable to sales meeting the definition of sales to repeat customers after fulfilment and service costs |
| **Repeat Customer sales retention** | The proportion of sales made to customers who met our definition of "Repeat" last year that were realised again this year from the same customers. Using our website data, the population who were subscribers in the prior year are identified and their sales in the current year then assessed. This is done for each month and summed to calculate the full year retention |
| **Year One Payback** | This short-term payback measure shows the actual return in this financial year of our investment in the prior year, removing the need to use a model to forecast the future |
